Portfolio Website: isaaciks.vercel.app

Available for a 12-week internship from May – Aug 2026

EDUCATION

National University of Singapore (NUS)

Aug 2023 – Expected May 2027

Bachelor of Engineering in **Computer Engineering**, Minor in Quantitative Finance

GPA: 4.48/5.0

Relevant Coursework: Data Structures & Algorithms, Software Engineering & Object-Oriented Programming, Machine Learning, Probability and Statistics, Linear Algebra, Engineering Principles, Digital Design, Computer Organization, Operating Systems

Activities: Eusoff Hall Floorball Team, NUS Recreational Basketball

PROFESSIONAL EXPERIENCE

Certis Group, Singapore

July 2025 – Dec 2025

AI Engineer Intern | Python, LangGraph, LangChain, RAG, Docker, Hugging Face, Docker, vLLM, FastAPI, PostgreSQL, Git, OpenAI, Groq, LoRA Fine-tuning, Prompt Engineering, GenAI, Tool Calling

- **Designed** and developed **agentic AI workflows** for incident reporting, classification, checklist and report generation.
- Built **RAG AI Agent** using a Hugging Face embedding model and vector search to enable context-aware responses about custom documents.
- Prepared datasets and **fine-tuned** open-weight models with **LoRA** and **prompt tuning**, which improved latency and **accuracy to over 95%**.
- **Designed** and implemented **RESTful API endpoints for model inference** using **vLLM** and **FastAPI**, enabling scalable and low-latency LLM serving.
- **Built evaluation pipelines** to enhance end-to-end user experience.

Oneberry Technologies, Singapore

May 2024 – Aug 2024

Full Stack Developer Intern | JavaScript, Typescript, CSS, Next.js, Node.js, React, Zustand, MQTT, RabbitMQ, Socket.io, Bootstrap, Figma, Strapi

- **Developed** and deployed **live sensor data monitoring** website, allowing Singapore's MRT to track **over 10,000 live sensors** in real time.
- **Spearheaded** the **frontend** development in a team of three, utilizing Bootstrap, Figma, CSS and Chart.js for data visualization.
- **Collaborated** on the **backend** development using **Strapi for database** management, **MQTT, RabbitMQ for live testing**.
- **Developed** an **e-learning web platform** featuring instructional videos, MCQ-based assessments, and automated certificate generation upon course completion.
- **Integrated SendGrid** to automatically deliver completion certificates via email upon successful course completion.

PROJECTS

Bomb Go Boom | Verilog, OLED, Basys3 FPGA, Digital Design, GitHub

Mar 2025 – May 2025

- **Spearheaded** the development of a **bomb-defusal game** consisting of three mini-games to be completed under time constraints.
- **Designed** and implemented the game logic in **Verilog**, including state machines.
- **Integrated** the software with the **Basys3 FPGA**, Oled, input switches and push-buttons.
- **Tested** and debugged the hardware-software interactions to ensure smooth gameplay.

NurseSched | Java, Object-oriented programming (OOP), Junit, Git, GitHub, SourceTree

Mar 2025 – May 2025

- **Collaborated** with my team to develop NurseSched, a desktop application for managing nurses' schedules, patient appointments and more, via a **Command Line Interface (CLI)** in **Java**.
- **Developed modules** for a To-do list and appointment management.
- Wrote **JUnit** tests for different modules to ensure system reliability.
- **Applied OOP principles** such as inheritance, abstraction and proper coding standards.

SKILLS & OTHERS

Programming Languages: Python, C++, C, Java, Typescript, JavaScript, SQL, Assembly

Frameworks and Tools: FastAPI, LangGraph, LangChain, RAG, GenAI, HuggingFace, vLLM, Next.js, Node.js, PostgreSQL, Git, Groq, OpenAI, Bootstrap, Strapi, Tailwind, CSS, MQTT

Cloud and DevOps: GitHub, Docker, Linux, Postman, AWS (EC2)

Certifications: IBM RAG and Agentic AI (ongoing)

Soft Skills: Collaborative team player, quick learner, adaptable, self-directed, problem solver.

Interests: Sports, gaming, watching shows.
