

LIM KAI SHENG ISAAC

+65 96345073 | kaishaeng@gmail.com | linkedin.com/in/isaackls7 | github.com/isaackls7 | isaackls.vercel.app

Available for a 6-month part-time internship starting Jan 2027

EDUCATION

National University of Singapore (NUS)

Aug 2023 – Expected May 2027

Bachelor of Engineering in Computer Engineering, Minor in Quantitative Finance

GPA: 4.44/5.0

- **Coursework:** Data Structures & Algorithms, Software Engineering & OOP, Machine Learning, Probability & Statistics, Linear Algebra, Digital Design, Computer Organization, Operating Systems
- **Activities:** Eusoff Hall Floorball, Eusoff Hall Handball, NUS Recreational Basketball

PROFESSIONAL EXPERIENCE

OCBC Singapore | *Software & AI Engineer Intern*

May 2026 – July 2026

- **Tech:** Python, LangGraph, FastAPI, TypeScript, RAG, Git, BitBucket, HeyGen, ElevenLabs
- Developed an agentic AI system simulating a Relationship Manager (RM) to deliver personalised financial advice and portfolio management support to Premier Private Client (PPC) customers.
- Designed multi-step LangGraph workflows to handle complex financial queries, enabling context-aware, multi-turn conversations with high-net-worth clients.
- Integrated RAG pipelines grounded on proprietary financial documents and market data, ensuring accurate and compliant responses.

Certis Group | *AI Engineer Intern*

July 2025 – Dec 2025

- **Tech:** Python, LangGraph, LangChain, RAG, Docker, Hugging Face, vLLM, FastAPI, PostgreSQL, OpenAI, Groq, LoRA
- Engineered agentic AI workflows for incident reporting, classification, checklist, and report generation.
- Built a RAG AI Agent using Hugging Face embeddings and vector search for context-aware responses on custom documents.
- Fine-tuned open-weight models with LoRA and prompt tuning, boosting accuracy above 95%; deployed via vLLM and FastAPI for low-latency LLM serving.
- Orchestrated end-to-end ML pipelines to capture user inputs and automatically refine models.

Oneberry Technologies | *Full Stack Developer Intern*

May 2024 – Aug 2024

- **Tech:** JavaScript, TypeScript, Next.js, Node.js, React, Zustand, MQTT, RabbitMQ, Socket.io, Bootstrap, Strapi
- Launched a live sensor monitoring website enabling Singapore's MRT to track over 10,000 live sensors; led frontend development with Bootstrap, Figma and Chart.js.
- Built RESTful API endpoints and collaborated on backend using Strapi, MQTT, and RabbitMQ for live data handling.
- Developed an e-learning platform with MCQ assessments and automated certificate delivery via SendGrid.

PROJECTS

Smart Plant Monitoring System | *C++, MCX444, ESP32, IPC*

Mar – May 2026

- Built an IoT system for remote plant monitoring that tracks environmental conditions and triggers automated watering based on sensor thresholds.

Fall Detector | *C, STM32L4S5, Embedded Systems, I2C Sensor Interface*

Feb – Mar 2026

- Developed an STM32L4S5-based fall detection system that identifies impact events and confirms falls through post-impact inactivity monitoring.

Bomb Go Boom | *Verilog, OLED, Basys3 FPGA, Embedded Programming*

Mar – May 2025

- Built a bomb-defusal game with three mini-games on Basys3 FPGA; programmed state machine game logic in Verilog and integrated OLED display, input switches, and push-buttons.

NurseSched | *Java, OOP, JUnit, Git, SourceTree*

Mar – May 2025

- Built a CLI desktop app in Java for managing nurses' schedules and patient appointments; implemented to-do and appointment modules with JUnit tests and OOP principles.

SKILLS

Languages: Python, C++, C, Java, TypeScript, JavaScript, SQL, Assembly

Frameworks & Tools: FastAPI, LangGraph, LangChain, RAG, HuggingFace, vLLM, Next.js, Node.js, PostgreSQL, OpenAI, Groq, HeyGen, ElevenLabs, Bootstrap, Strapi, Tailwind, MQTT

Cloud & DevOps: GitHub, BitBucket, Docker, Linux, Postman, AWS (EC2)

Certifications: IBM RAG and Agentic AI (ongoing)

Soft Skills: Collaborative team player, proactive, quick learner, adaptable, self-directed, problem solver, leadership

Interests: Software Engineering focused on Backend and AI integrated workflows
